

HTIGLOBAL JOINS USAIG'S PERFORMANCE VECTOR SAFETY INITIATIVE

HTIGLOBAL LLC, a Texas based company, has become a participant in USAIG's Safety Bucks Program. This program enables policyholders that operate turbine-powered helicopters to select US\$2,500 in Safety Bucks to go toward helicopter pilot training or maintenance technician training expenses in each year of policy coverage.

SAFETY BUCKS PROGRAM

USAIG started the Safety Bucks Program in the 1990s to assist and incentivize policyholders to make recurrent helicopter simulator training standard practice. It was later expanded to include helicopter maintenance technician training and some in-aircraft training activities. In 2015 it was integrated into USAIG's broader Performance Vector safety initiative, which provides a portfolio of safety services from which eligible policyholders can make one annual selection.

HTIGLOBAL recognizes the importance of technical training and its criticality to safety across the helicopter industry. The company's experienced instructors provide training on a wide variety of helicopter types and powerplants using FAA-approved courseware and can deliver training at the operator's location.

HTIGLOBAL's participation in USAIG's Performance Vector safety initiative makes world class helicopter mechanic training more affordable for operators who are USAIG policyholders by enabling Safety Bucks to offset US\$2500 in training costs.

USAIG continually upgrades its popular Performance Vector Suite of Safety Programs to keep pace with changes and improvements in Aviation Safety Protocols. Learn more about USAIG Performance Vector under the 'Safety' tab at www.usaig.com. Visit www.htiglobal.us to explore available services and training courses.
